SRA3 print and trim test

Paper 320 x 450 mm / Finished A3 297 x 420 mm / Bleed 3 mm per edge

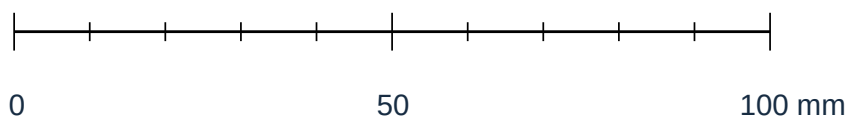
Print at Actual size (100%)

Select SRA3 stock and the tray specified in the manual. Match the media type in the driver.

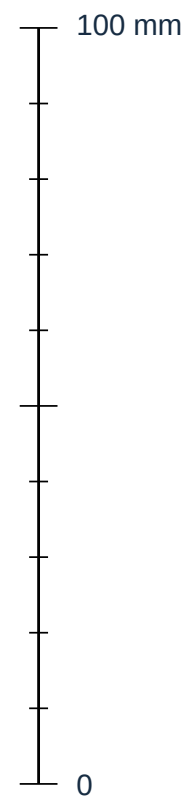
Measure the scale lines before trimming. Check that all eight crop marks print in full.

Print scale

Measure between the end ticks.



If either line is short or long, check the print driver for scaling.



Trim and inspect

Use the eight crop marks to trim the sheet to A3. Inspect the four colored edge strips.

Each strip should reach the cut edge. If one does not, inspect clipping or image shift.

Record the copier model, driver, tray, media type and weight before comparing a second machine.
